```
The present invention relates to a method for optimizing at least one physico-chemical property of an antibody by a computational screening method. The method comprises: receiving a template antibody structure; selecting at least one variable position belonging to the antibody structure; selecting at least one amino acid to be considered at the variable position (s); analyzing the interaction of each selected amino acid at each variable position with at least part of the remainder of the antibody, including the selected amino acids at other variable positions; and identifying a set of at least one antibody sequence with at least optimized physico-chemical property. The method is useful for optimizing the physico-chemical property of an antibody, especially the stability, solubility, or antigen binding affinity. The optimized antibody may be useful for treating a patient. The present sequence is an antibody way be variable region sequence used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   59
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                97

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                           The present invention relates to a method for optimizing at least one physico-chemical property of an antibody by a computational screening method. The method computases: receiving a template antibody structure; selecting at least one variable position belonging to the antibody structure; selecting at least one amino acid to be considered at the variable position(s); analyzing the interaction of each selected amino acid at each variable position with at least part of the remainder of the antibody, including the selected amino acids at other variable positions; and identifying a set of at least one antibody sequence with at least one optimized physico-chemical properties of an antibody especially the stability, solubility, or antigen binding affinity. The optimized antibody may be useful for treating a patient. The present sequence is an antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Computer optimization of physicochemical properties of antibodies comprises analyzing the interactions of amino acids at variable

The present invention relates to a method for optimizing at least one physico-chemical property of an antibody by a computational screening method. The method comprises: receiving a template antibody structure; selecting at least one variable position belonging to the antibody structure; structure; selecting at least one amino acid to be considered at the variable position(s); analyzing the interaction of each selected amino acid at each variable position with at least part of the remainder of the antibody, including the selected amino acids at other variable positions; and identifying a set of at least noe antibody sequence with at least optimized physico-chemical property. The method is useful for optimizing the physico-chemical properties of an antibody, especially the stability, or antigen binding affinity. The optimized antibody may be useful for treating a patient. The present sequence is an antibody wariable region sequence used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  42 GlyLys----GlyLeu----GluTrplleGlyGluIleAsnHisSerGlySerThrAsnT 59
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  nybrid antibody; framework region; homology; immunogenicity.

The invention relates to a method of producing a hybrid antibody or hybrid antibody fragment by: (1) providing an initial antibody having specificity for a target; (ii) determining the sequence of a variable region of the initial antibody; (iii) selecting a first component of the variable region consisting of FR1, FR2, FR3 and FR4; (iv) comparing the sequence of the first component to sequences contained in a reference database of antibody sequences or antibody fragment sequences from a target species; (v) selecting a sequence from an antibody in the database which demonstrates a high degree of homology to the first component; (vi) selecting a second component selected from the group consisting of FR1, FR2, FR3 and FR4; (vi) comparing the sequence of the second component to sequences contained in a reference database of antibody sequences or antibody fragment sequences from the target species; (vii) selecting a sequence from the database which demonstrates a high degree of homology to the second component and which is from a different antibody than the selected antibody; and (ix) operatively linking the selected framework sequences to one or more complementarity determining antibody fragment. The method is useful for producing a hybrid antibody fragment (claimed). The antibody and creamwork regions from a single antibody variable heavy or variable light chain to receive the CDRs. This produces antibodies that mathain to receive the CDRs. This produces are that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             61

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         maintaining an optimum binding profile. This sequence represents the amino acid sequence of an antibody from the VH gene locus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             97

The invention relates to a method of preparing a lymphoid cell line capable of directed constitutive hypermutation of a target nucleic acid region. The method comprises screening a cell population for ongoing target sequence diversification and selecting a cell in which the crate of target nucleic acid mutation exceeds that of other nucleic acid mutation of method for preparing a gene product with a desired activity, comprising expressing a nucleic acid encoding the target gene operably linked to a sequence which directs hypermutation e.g., terminal deoxynucleotidyl expressing a nucleic acid encoding the target gene operably linked to a sequence which directs hypermutation e.g., terminal deoxynucleotidyl cells which express a mutated gene product with the desired activity. One or more clonal populations of the identified cells is established, and cells with an improved activity of interest are selected. These steps may be iteratively repeated until a gene product with a desired of activity is obtained. The cell lines prepared according to the method of the invention are used for directed constitutive hypermutation of a nucleic cardiaced bypermutation of a gene product, preferably an enzyme or an immunoglobulin (Ig) with a desired activity. In the exemplifications of the invention, IgM-secreting Ramos cells were selected for use as they undergo hypermutation during clonal expansion. This was determined on the basis of the amount of diversity in the heavy chain variable region (VH). Sequences AAB01949-B01954 which have lost the ability to bind anti-idiotype antipodies (anti-idi have lost the ability to bind anti-idiotype antipodies (anti-idi Ab) relative to the wild-type VH (AAB01949). Note: The present sequence is not shown in the specification, but is derived from the wild-type Ramos cell VH shown in figure 7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Lymphoid cell line preparation useful for producing gene products having desired activity, involves screening and selecting cells having ongoing target sequence diversification and higher mutation rates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Example 5; Page; 69pp; English

Sequence 25, Application US/09490070A

Patent No. 6696248

GENERAL INFORMATION:
TIGHT No. 6696248

SECONDER NO. 6696248

TITLE OF INVENTION: Protein/(Poly) peptide libraries
NUMBER OF SEQUENCES: 373

CORRESPONDENCE ADDRESS:
ADDRESSEE: Colin G. Sandercock, Esq. c/o Heller Ehrman
White & McAuliffe

STREET: 1666 K Street, N.W., Suite 300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CITY: Washington

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                        The present sequence is the anti-murine CTLA-4 sFv (M24 sFv). This is a membrane-associated protein which binds to CTLA-4. Chimeric constructs comprising DNA sequences encoding the extracellular domain of murine CTLA4 and human CDB were used for the study of anti-CTLA4 sFv protein. The anti-hCTLA4 sFv functions as a ligand binding to CTLA-4 on activated T-cells and antagoniess the co-stimulatory signal provided by the interaction between donor B7 and recipient CD28. Cells expressing the anti-hCTLA4 sFv failed to stimulate T-cell proliferation. This is used in xenograft-specific immunosuppression

This invention describes a novel cell-targeting vector (A) containing a DNA sequence (I) encoding a single-chain variable antibody fragment (scFv). The products of the invention have antivoral, cycostatic and immunostimulant activity and can be used in gene therapy, immunization and diagnosis particularly of T cell-associated diseases, specifically acquired immune deficiency syndrome (AIDS), severe combined immune deficiency syndrome (AIDS), severe combined immune celiciency syndrome (AIDS), severe combined immune celiciency (SCID) or T cell lymphoma. (A) target T cells, independently of the CD4 receptor, with high selectivity, 4-5 fold selectivity over thuman B cells, and 1000 fold selectivity, 4-5 fold selectivity over cells, and acceptant, fully defined in the specification. It was used to transform (SNV)) cells, and the specification. It was used to transform (SNV)) cells, channa T lymphocyte) cells, and HeLa (human cervical carcinoma) cells. After 48 hours, the cells were stained with X-gal to determine transformation. The viral titer (infectious units/ml) was over 1 million for D17, I million for CB166 but less than 100 for HeLa, showing the high selectivity for human T cells. This sequence represents the SNV-env lesder/human 6C3-serv fusion construct used in the represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      117 IleSerAlaAspLysSerIleSerThrAlaTyrLeuGlnTrpSerSerLeuLysAlaSer 136
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              137 AspThrAlaMetTyrTyrCysAlaArgValSerGlyTyrCysSerSerThrSerCysTyr 156
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        construction of novel cell targeting vectors described in the invention. ```
The invention relates to human monoclonal antibodies or their antigen binding portions that specifically bind to dendritic cells and has one or more of the following characteristics: (a) a binding affinity constant to a dendritic cell of at least about 10 to the power 7 M-1; (b) the ability to opsonise a dendritic cell; (c) the ability to internalise after binding to dendritic cells; or (d) the ability to activate dendritic cells. The isolated human monoclonal antibody or its antigen binding portion may also have any of the following characteristics: (a) mediates cytolysis of dendritic cells in the presence of human effector cells; or (b) inhibits growth of dendritic cells. The antibodies or its antigen binding portion, binds to and blocks the human mannose receptor on dendritic cells. The antibodies have immunomodulatory, antiinflammatory, antirheumatic, antiarthritic, neuroprotective, antidiabetic, antianaemic,

endocrine, dermatological, antithyroid, uropathic, ophthalmological and muscular activity. The antibodies or their antigen-binding fragments are useful for inhibiting growth of a dendritic cell, inducing cytolysis of a dendritic cell, inducing cytolysis of a dendritic cell, treating or preventing a dendritic cell mediated disease, detecting the presence of a dendritic cell, targeting an antigen to a bacterium to human mannose receptor on dendritic cells. In particular, the antibodies may be used to treat, autoimmune disease, graft versus host disease, immune system or inflammatory disorders (e.g. rheumatoid pernicious anaemia, Addison's disease, lupus erythematosus, Reiter's syndrome and Graves disease. The present sequence is that of the human monoclonal antibody Bil variable heavy chain, useful to the invention

New molecular conjugate having a monoclonal antibody that binds to human APCs linked to a beta human chorionic gonadotropin, useful for inducing ecytotoxic T cell response in cancers and infectious diseases.

SEQ ID NO 4; 82pp; English

The present invention describes a molecular conjugate comprising a monoclonal antibody that binds to human antigen presenting cells (APCs) inted to beta human choronic gonadorrogin (betafico), where the antibody comprises a heavy and/or light chain variable region derived from a human choronic gonadorrogin (betafico), where the antibody comprises a heavy and/or light chain variable region derived from a human comprise and the page of a mino acid sequences of SEQ ID NO:30 or 32 (ABR46847, or ABR46849), respectively. Also cescribed: (1) a molecular conjugate comprising a human antibody heavy chain and a human antibody light chain, where either or both chains are inved to betahcs; (2) a molecular conjugate comprising a human antibody that binds to human APCs linked to betahcs; (where the conjugate comprises the 411 amino acid sequence of SEQ ID NO:12 (ABR46829); (3) a composition comprising any of the molecular conjugates as described above, and a carrier, optionally in combination with an activate antigen is processed and presented to T cells in a manner which induces or enhances a T cellmediated response against the antigen; (5) immunising a subject comprising dendritic cells and/or an immunostimulatory agent; and proliferation of endoritic cells and/or an immunostimulatory agent; and proliferation of endoritic cells and/or an immunostimulatory agent; and compinating dendritic cells and/or an immunostimulatory agent; and compinating dendritic cells and/or an immunostimulatory agent; and presented to T cells in a manner which induces or enhances a cytotoxic T cell response against the antigen. The molecular conjugate either in vivo or exvivo with APCs such that the antigen is internal sed, processed and presented to T cells in a manner which induces or enhances a cytotoxic T cell response against the antigen. The molecular conjugate either in vivo or exvivo with APCs such that the antigen is internal sed, processed and presented to T cells in a manner which induces or enhances a cytotoxic T cell response against eliciting a potent antigen specific cytotoxic T lymphocyte response, including melanoma, fibrosarcoma, leukaemia, HIV, hepatitis, malaria and herpes. The present sequence represents a human antibody B11 heavy chain variable region, which is used in the exemplification of the present

Ramakrishna V; Keler T, Endres M, He L, New molecular conjugate having a monoclonal antibody that binds to human APCs linked to a beta human chorionic gonadotropin, useful for inducing a cytotoxic T cell response in cancers and infectious diseases.

Claim 16; SEQ ID NO 12; 82pp; English

The present invention describes a molecular conjugate comprising a monoclonal antibody that binds to human antigen presenting cells (APCS) inhear antibody conformed to beta human chorionic gonadotropin (betahCG), where the antibody comprises a heavy and/or light chain variable region derived from a human chorionic gonadotropin (betahCG), where the antibody comprises a heavy and/or light chain, where either or both chains are chain and a human antibody light chain, where either or both chains are linked to betahCG; (2) a molecular conjugate comprising a human antibody has to human APCs linked to betahCG; (3) a molecular conjugate comprising a human single conjugate comprises the 411 amino acid sequence of SEQ ID NO:12 (ADR46829); (3) a composition comprising any of the molecular conjugates comprises the 411 amino acid sequence of SEQ ID NO:12 (ADR46829); (3) a composition comprising any of the molecular conjugates a described above, and a carrier, optionally in combination with an adjuvant; (4) inducing or enhancing a T cell-mediated immune response, against betahCG, comprising contacting any of the molecular conjugates are described above with APCs such that the antigen; (5) immunishing a subject comprising administering any of the molecular conjugates described above with APCs such that the antigen; (5) immunishing a subject comprising doministering any of the molecular conjugate either in vivo or expirating forming a conjugate of the antigen and anothor and antigen, or expired to T cells in a manner which induces or enhances a cytotoxic T (6) inducing or enhancing a cytotoxic T cell response against the antigen is internalised, processed and contacting a conjugate either in vivo or exvivo with APCs such that the andigen is internalised, processed and cytostatic, antimicablai, immunosuppressive, anti-HIV, hepatotropic, cytostatic, antimicablai, immune disorders, cancers and infectious a conjugate by cell criminal activities, and can be used as a CRB agonist, and in vaccines. The methods and compositions of the

CC VHS-51 or VK-L15 germline sequence with the 98 or 95 amino acid sequences of SEQ ID NO:30 or 32 (ADR46847, or ADR46649), respectively. Also described: (1) a molecular conjugate comprising a human antibody heavy chain and a human antibody light chain, where either or both chains are linked to betahCG; (2) a molecular conjugate comprising a human single chain antibody that binds to human APCS linked to betahCG, where the CC (ADR46829); (3) a composition comprising any of the molecular conjugates as described above, and a carrier, optionally in combination with an adjust betahCG, comprising or enhancing a real-mediated immune response, adjuvant; (4) inducting or enhancing a real-mediated immune response, against betahCG, comprising contacting any of the molecular conjugates described above with APCS such that the antigen is processed and presented to T cells in a manner which induces or enhances a T cell-comprising administering any of the molecular conjugates described above, cc optionally in combination with an adjuvant, a cytokine which stimulates proliferation of dendritic cells and/or an immunostimulatory agent; and (6) inducing or enhancing a cytotoxic T cell response against the antigen is internalised, processed and comprising forming a conjugate of the antigen and a monoclonal antibody with APCs such that the antigen is internalised, processed and comparising forming a conjugate of the conjugate either in vivo or ex vivo with APCs such that the antigen is internalised, processed and comparising forming a conjugate of the conjugate of the internalised, processed and comparising forming a conjugate of the conjugate of the conjugate of the ansigen and in vaccines against the antigen. The molecular conjugate and such that the antigen is internalised, processed and corporated and antimalarial activities, and can be used as a CDB agonist, and in vaccines. The methods and compacting methods and conjugate of the processed and and internalised. Processed and and intimalarial activities, and in persent the proce eliciting a potent antigen-specific cytotoxic T lymphocyte response, including melanoma, fibrosarcoma, leukaemia, HIV, hepatitis, malaria and herpes. The present sequence represents a human antibody B11 heavy chain variable region, which is used in the exemplification of the present useful for inducing a cytotoxic T cell response, and in particular treating autoimmune disorders, cancers and infectious diseases by invention.

The present invention describes a molecular conjugate comprising a monoclonal antibody that binds to human antigen presenting cells (RPCS) intended to beta human chorionic gonadotropin (betahCG), where the antibody comprises a heavy and/or light chain variable region derived from a human comprises a heavy and/or light chain variable region derived from a human comprises of SEQ ID NO:30 or 32 (ADR4644), or ADR4649), respectively. Also described: (1) a molecular conjugate comprising a human antibody heavy chain antibody that binds to human APC's linked to betahCG, where the conjugate comprising a human single conjugate comprises the 411 amino acid sequence of SEQ ID NO:12 (ADR46829); (3) a composition comprising any of the molecular conjugates comprises the 411 amino acid sequence of SEQ ID NO:12 (ADR46829); (3) a composition comprising any of the molecular conjugates comprises the 411 amino acid sequence of SEQ ID NO:12 (ADR46829); (3) a composition comprising any of the molecular conjugates comprising orentacting any of the molecular conjugates of searched to realis in a manner which induces or enhances a realized above with APC's such that the antigen is processed and presented to realis in a manner which induces or enhances a realized propagation of dendritic cells and/or an immunostimulatory agent; and comprising administering any of the molecular conjugates described above, with APC's such that the antigen is internalised, processed and (6) inducing or enhancing a cyctocxic T cell response against the antigen is internalised, processed and compising the antigen is internalised, processed and comprising forming a conjugate of the antigen and a monoclonal antibody which binds to APC's, and contracting the conjugate either in vivo or exvivo with APC's such that the antigen is internalised, processed and compensing and contacting the conjugate either in vivo or curcide and antimalarial activities, and condense actions of the present invention artigen specific cytotoxic T lymphocyte response. Including melanoma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New molecular conjugate having a monoclonal antibody that binds to human APCs linked to a beta human chorionic gonadotropin, useful for inducing ecytotoxic T cell response in cancers and infectious diseases.
CD8 agonist, vaccine; autoimmune disorder; cancer; infectious disease; melanoma; fibrosarcoma; leukaemia; HIV; hepatitis; malaria; herpes; antibody B11; betahCG-B11 molecular conjugate; fusion protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ramakrishna V;

The invention comprises a human monoclonal antibody that binds to phospholipase A2 (PLA2). The monoclonal antibody of the invention is useful in the preparation of a medicament for the treatment of inflammatory and degenerative disorders stemming from inflammatory reactions in the joints, skin, and blood vessels, arthritis, psoriasis, asthma, Albrehmer's disease, atheroselerosis, and restenosis. The present amino acid sequence represents the heavy chain from a monoclonal antibody that is specific for the human phospholipase A2 (PLA2) enzyme.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a human monoclonal antibody that binds to platelet-derived growth factor-D (PDGF-D). The antibodies are useful for treating chronic and recurrent human diseases, such as inflammation, autoimmunity and cancer. The PDGF-D nucleic acids and polypeptides are useful for modulating collagen formation, and for staging various cancers. Antibodies to platelet-derived growth factor-D (PDGF-D) were generated using an active protein fragment of the gene product from the clone 30664188.0.99 arising in the conditioned medium obtained when HEK293 cells are transfected with the plasmid pCEP4/Sec-30664188. This sequence corresponds to a protein used in the invention.

The invention relates to a human monoclonal antibody that binds to platelet-derived growth factor-D (PDGP-D). The antibodies are useful for treating chronic and recurrent human diseases, such as inflammation, autoimmunity and cancer. The PDGP-D nucleic acids and polypeptides are useful for modulating collagen formation, and for staging various cancers. Antibodies to platelet-derived growth factor-D (PDGF-D) were generated using an active protein fragment of the gene product from the clone 30664188.0.99 arising in the conditioned medium obtained when HEX293 cells are transfected with the plasmid pCBP4/Sec-30664188. This sequence corresponds to a protein used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 ATCATCTATCCTGGTGACTCTGATACCACATACAGCCCGTCCTTCCAAGGCCGGGCGAGT 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a human monoclonal antibody that binds to platelet-derived growth factor-D (PDGF-D). The antibodies are useful for treating chronic and recurrent human diseases, such as inflammation, autoimmunity and cancer. The PDGF-D nucleic acids and polypeptides are useful for modulating collagen formation, and for staging various cancers. Antibodies to platelet-derived growth factor-D (PDGF-D) were generated using an active protein fragment of the gene product from the cilone 30664188. 0.99 arising in the conditioned medium obtained when HEK293 cells are transfected with the plasmid pCBF4/Sec-30664188. This sequence corresponds to a protein used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ATCATCTATCCTGGTGACTCTGATACCACATACAGCCCGTCCTTCCAAGGCCGGGCGAGT

The invention relates to a human monoclonal antibody that binds to platelet-derived growth factor-D (PDGF-D). The antibodies are useful for treating chronic and recurrent human diseases, such as inflammation, autoimmunity and cancer. The PDGF-D nucleic acids and polypeptides are useful for modulating collagen formation, and for staging various cancers. Antibodies to platelet-derived growth factor-D (PDGF-D) were generated using an active protein fragment of the gene product from the clone 30664188.0.99 arising in the conditioned medium obtained when HEK293 cells are transfected with the plasmid pCEP4/Sec-30664188. This sequence corresponds to a protein used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     antibody; binding fragment; platelet derived growth factor-DD; PDGF-DD; nephritis; mesangial cell proliferation inhibition; mesangial proliferative glomerulonephritis; nephrotropic; antiinflammatory; dermatological; immunosuppressive; antiidiabetic; gene therapy; human; monoclonal antibody; mAb.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 ATCATCTATCCTGGTGACTCTGATACCACATACAGCCCGTCCTTCCAAGGCCGGGGGAGT

Disclosure; SEQ ID NO 38; 115pp; English.

The present invention describes an antibody or its binding fragment that binds platelet derived growth factor-DD (PDGF-DD), where the antibody is useful in preparing a medicament for treating nephritis. Also described: (1) a method of detecting nephritis; (2) a method of thibiting mesnagial cell proliferation; and (4) a method of training mesnagial cell proliferation; and (4) a method of traininflammatory, dermatological, immunosuppressive and antidabetic activities, and can be used in gene therapy. The antibody or its binding fragment, that binds PDGF-DD, can be used in preparing a medicament for treating nephritis and related disorders, e.g., mesnagial proliferative glomerulonephritis. The present sequence represents a human monoclonal antibody (mab) variable region sequence represents a human exemplification of the present invention.

WPI; 2004-480601/45. N-PSDB; ADP22193 New recombinant human monoclonal antibody that specifically binds to Tumor Necrosis Factor-alpha, useful for treating neoplastic disease such as cancers, or immuno-mediated inflammatory diseases such as rheumatoid arthritis.

Example 10; SEQ ID NO 100; 213pp; English.

The present invertion describes a numan monoclonal antibody (1) that the present invertion describes a numan monoclonal antibody (1) that specifically binds to tumour necrois factor-alpha (TNFa) and comprises:

(a) a heavy chain complementarity determining region 1 (CDR1) having the two fully defined 11 amino acid and (b) a light chain CDR1 having the two fully defined 11 amino acid cand (b) a light chain CDR1 having the two fully defined 11 amino acid cand (b) a light chain CDR1 having the two fully described: (1) assaying (CC (M1) the level of TNFa in a patient sample, comprising contacting with (I), and detecting the level of binding between the antibody and TNFa in the sample; (2) a composition comprising the antibody or its functional fragment and a carrier; (3) treating (M2) an animal suffering from a natural by selecting an animal in need of treatment for the disease by administering the human corlonal antibody of (I); and (4) inhibiting (M3) TNFa induced apoptosis by administering the human monoclonal antibody of (I); and animal by selecting an animal in need of treatment for the correction of the sample; (2) antibacterial, antibacterial, antibacterial antibody (I) is useful in the preparation of contribacterial, antibacterial and antiapprosite; antibactoropic, antibacterial, antibactory immunosuppressive, nephrotropic, contribacterial, antibacterial cancer, immunosuppressive, nephrotropic, as a TNFa antagoniat. The antiabody (I) is useful in the preparation of medicament for treating TNF induced apoptosis, neoplastic disease such as thermacoid arthritis, glomerulonephritis, atherosclerosis, psoriassis, restenosis, autoimmune disease, Crohn's disease such as rheumacoid arthritis, glomerulonephritis and antiple sclerosis. The present sequence represents a human anti-TNFa antibody light chain variable region, which is used in the contribation of the present invention. present invention describes a human monoclonal antibody (I) that The

The monoclonal antibody of the invention is useful in the preparation of a medicament for the treatment of inflammatory and degenerative disorders stemming from inflammatory reactions in the joints, skin, and blood vessels, arthritis, psoriasis, asthma, Alzheimer's disease, atherosclerosis, and restenosis. The present amino acid sequence represents the heavy chain from a monoclonal antibody that is specific for the human phospholipase A2 (PLA2) enzyme.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 33,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                              148
